

SECURE PRINTER SYSTEM FOR GAMING DEVICES

ABSTRACT

A modular printer system comprising a support frame, a chassis, a media holder, and a
5 printer assembly. The support from supports the other components and may be attached to other
devices. The chassis is slidably attached to the support frame so that it may be at least partially
removed from the support frame thereby exposing components attached to the chassis. The
chassis is adapted to hold the media holder and the printer assembly. The media holder holds
media that may be printed on by the printer assembly. The printer assembly may be removed
10 from the chassis to service the printer assembly and give full access to the media path. The
printer assembly comprises a printer for printing on the media and a controller for controlling the
printer and communicating with other devices.
